

## Weaver's Knot (Sheet Bend) Yarn under tension

1. Create a loop in the passive yarn (blue).

2. Bring the end of the working yarn (purple) up through the loop.

3. Bring the working end around and **under** both sections of the passive yarn, then up and **over** the passive yarn.

4. Guide the working end through the space created between the short end of the passive yarn and itself.

5. Tighten—hold the passive yarn (blue) with one hand, and pull the active yarn and its end with the other hand.

There is more than one way to tie a Weaver's Knot.

The version illustrated on this page is a method to use when there is a small amount of yarn to work with or when the yarn is under some tension.

## Weaver's Knot (Sheet Bend) Yarn under no tension

1. Of the ends of the yarns to be joined, the end on the right (purple) is the active yarn, the one of the left (blue) the passive yarn.

Use this method when there is sufficient yarn to work with or when there is little or no tension on the yarn.

2. Cross the ends with the active yarn on the bottom. Hold the cross between the thumb and first finger.

4. Drop the active yarn. Take the end of the passive yarn (blue), bend it and insert in the circle formed in 3.

3. Take the active yarn that is below the cross, bring it **over** the thumb and **under** the left end of itself

5. Tighten by holding the passive thread (blue) with one hand and pull on the active ends with the other hand.
